

Water Activated Security Tape Benefits

Water activated security tape has a host of benefits over poly film carton sealing tapes:

- Much lower cost than plastic film security tapes
- Leaves behind a red layer when peeled away
- 3.188” wide, which makes it difficult to seal over with 2” or 3” wide tapes
- Faster affixing to the cartons
- Low minimum order quantity for custom imprinting
- No wrinkling from the handheld tape guns
- No stretching (polypropylene will stretch)
- Adhesive and back red layer bonds with the corrugated box material
- Stronger seal—reinforced with string
- Not affected by temperature extremes
- Better for overfilled cartons
- Excellent tamper evidence when cut—strings protrude when cut
- More professional appearance

The main reason why people continue to select film carton sealing tapes is because they are not able to tape from fixed locations—they need to be mobile and use hand tape guns. If your security tape application involves carton sealing from fixed locations, AIP can supply you with the automatic tape machines.
